NEC 310.16 — AMPACITY OF INSULATED CONDUCTORS

≤2000 V · ≤3 CCC · 30°C AMBIENT

SOURCE · NFPA 70 (NEC) 2023 EDITION · TABLE 310.16

Use this matrix to look up base ampacity. Apply temperature correction (Table 310.15(B)(1)) and conductor-count adjustment (Table 310.15(B)(3)) before sizing.

NOTES · USAGE

- Aluminium ratings are blank where NEC does not list the conductor (sizes <12 AWG).
- Apply derating before comparing to load: A_eff = A_base × f_temp × f_count.
- Small-conductor rule (NEC 240.4(D)) caps Cu 14/12/10 AWG breakers at 15/20/30 A, and Al 12/10 AWG breakers at 15/25 A — regardless of insulation rating.
- Continuous loads (3+ hrs at full current) require 1.25× factor on the load side before this table is consulted (NEC 210.19(A) / 215.2(A)).
- In conditions other than ≤3 ccc / 30°C ambient / dry-location raceway, additional tables apply: 310.17 (free air), 310.18–.20 (high-temperature applications).
